Y-12 National Security Complex
2009 Illness and Injury Surveillance Report
At A Glance

The Y-12 work force consisted of 4,891 employees in 2009. The size of the work force has been about 5,000 since 2003. Women made up about 27 percent of all workers, which is consistent with other DOE sites participating in the Illness and Injury Surveillance Program (IISP).

There were 892 absences reported in 2009, a decrease of 86 absences from 2008. The decrease in absences was not due to any particular occupational group or diagnosis category. The site reports absences of 3 days or greater in length which are included in this report.

Among both men and women, disorders of the musculoskeletal system and respiratory conditions were the 2 most common diagnosis categories reported in 2009 and have been among the 3 most common categories since 2003. These 2 diagnostic categories are typically among the 3 most commonly reported at DOE sites participating in the IISP.

Women lost 12,528 calendar days due to injury and illness with an average length of absence of 37 days. Men lost 21,537 calendar days due to injury and illness with an average absence lasting 39 days. The average length of absences has remained stable since 2003 for both men and women.

Age-adjusted rates for all illness and injury diagnoses combined are the lowest they have been for both men and women since 2003. The reduction in the rates does not appear to be the result of a reduction in any particular disease category.

Line Operators had the highest absence rate among men and women in 2009. Administrative Support workers had the lowest absence rate for men and Security and Fire workers had the lowest absence rate for women.

Ten diagnoses for sentinel health events were reported in 2009. Seven diagnoses involved carpal tunnel syndrome, reported by 2 women and 5 men. Three diagnoses were reported by Professional workers. Carpal tunnel syndrome is among the more commonly observed sentinel health events at IISP sites.

There were 10 OSHA-recordable events among women and 32 events among men. The rate of OSHA events among the Y-12 work force in 2009 was 1 per 100 workers, the same as in 2008. OSHA event rates have declined at Y-12 since 2003, similar to the decline that has been observed nationally and within DOE.

Injuries accounted for 63 percent of the OSHA diagnoses reported by men and 88 percent of the diagnoses among women. The most common types of injuries were sprains and strains and open wounds among men and bruises and superficial injuries among women.

Among women, Crafts workers had the highest rate of OSHA events (12 per 100 workers); Service workers had the highest rate of OSHA events among men (3 per 100 workers). No OSHA events were reported by workers in the Professional, Technical Support, Security and Fire, and Line Operators occupational categories.

There was a 33 percent decrease in OSHA events for women from 2008 (15 events) to 2009 (10 events). The decrease in number of lost or restricted days for these events was 80 percent from 2008 (247 days) to 2009 (49 days). The high number of lost and restricted days in 2008 was due, in part, to one long absence (180 days lost or restricted). The number of OSHA events decreased 38 percent for men from 52 events in 2008 to 32 events in 2009. The number of days lost or restricted decreased only 15 percent (527 days in 2008 and 448 days in 2009).

Sentinel Health Events for Occupations (SHEOs)

An occupational sentinel health event (SHEO) is a disease, disability, or death that is likely to be occupationally related. Although sentinel health events may indicate an occupational exposure, many may result from nonoccupational exposures. Sentinel health events are therefore assessed in two categories:

Definite Sentinel Health Events: Diseases that are unlikely to occur in the absence of an occupational exposure (e.g., asbestosis).

Possible Sentinel Health Events: Diseases that may be occupational but can also occur in the absence of an occupational exposure (e.g., lung cancer or carpal tunnel syndrome).
